

~~first processing means for executing image~~
data magnifying processing based on first magnifying rate
information; and

second processing means for executing the
image data magnifying processing for an image to be printed
based on the image data magnified by said first processing
means, based on second magnifying rate information,

wherein said first magnifying rate information
is determined based on at least one of a resolution of
printing performed by said printing section, a processing
load to be borne by said first processing means, a capacity
of said memory and a resolution shown by the image data, and
a magnifying rate of the image to be printed on the printing
medium based on the image data.

14. A printing system as claimed in claim 13,
wherein said second magnifying rate information is determined
based on said first magnifying rate information and the
magnifying rate of the image to be printed on the printing
medium based on the image data.

15. A printing system as claimed in claim 14,
wherein the magnifying rate of the image to be printed on the

CC17
printing medium based on the image data is a product of a magnifying rate shown by said first magnifying rate information multiplied by a magnifying rate shown by said second magnifying rate information.

EE
16. ~~A printing system as claimed in claim 13,~~
wherein said memory is provided in the printing section to store the image data magnified by said first processing means.

Bl
17. A printing system as claimed in claim 13,
wherein said second processing means is provided in the printing section.

18. A printing system as claimed in claim 13,
wherein the printing section having a printing apparatus using a printing head to perform printing on the printing medium and the image processing section having an apparatus outputting the image data to the printing apparatus.

19. A printing system as claimed, in claim 18,
wherein the printing head is an ink jet head ejecting ink onto the printing medium.

20. ~~A printing system as claimed in claim 19,~~
wherein the ink jet head has electro-thermal converting
element applying thermal energy to ink to eject the ink by
utilizing the thermal energy.

21. A printing method of performing printing on a
printing medium by means of a printing section, based on
image data, said method comprising the steps of:

executing image data magnifying processing based on
first magnifying rate information; and

performing printing an image obtained by executing
magnifying processing for the image data magnified by said
executing magnifying step, based on second magnifying rate
information,

wherein said first magnifying rate information is
determined based on at least one of a resolution of printing
performed by said printing section, a processing load to be
borne by said first processing means, a capacity of a memory
for storing the image data and a resolution shown by the
image data, and a magnifying rate of the image to be printed
on the printing medium based on the image data.

22. ~~A printing method as claimed in claim 21,~~
wherein said second magnifying rate information is determined
based on said first magnifying rate information and the
magnifying rate of the image to be printed on the printing
medium based on the image data.

23. A printing method as claimed in claim 21,
wherein the magnifying rate of the image to be printed on the
printing medium based on the image data is a product of a
magnifying rate shown by said first magnifying rate
information multiplied by a magnifying rate shown by said
second magnifying rate information.

24. ~~A printing method as claimed in claim 21,~~
wherein said memory is provided in the printing section to
store the image data magnified by said first processing
means.

25. A printing method as claimed in claim 21,
wherein the ~~printing section~~ having a printing apparatus
using a printing head to perform printing on the printing
